IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method of automatic recognition of company names in speech utterances, comprising the steps of:

storing entries including company names and variants of the company names in a database, the variants including at least one of mix-ups of part of company names, colloquial formulations of company names, abbreviations of company names, and acronyms of company names;

generating at least one word sequence hypothesis by a speech recognizer from a speech utterance consisting of one or more words,

comparing the word sequence hypothesis with the entries which represent company names stored in the database, wherein certain words defined a priori are not taken into account when a word

sequence hypothesis is compared with entries of the database; and  
selecting a company name as a recognition result in dependence  
on the result of the comparison.

2. (Previously Presented) A method as claimed in claim 1,  
wherein the speech recognizer produces a probability value for each  
of the at least one word sequence hypothesis, which probability  
value is taken into account for the comparison.

3. (Previously Presented) A method as claimed in claim 1,  
further comprising the step of using word sequence hypotheses  
produced by the speech recognizer are used for an adaptation of a  
speech model utilized by the speech recognizer.

Claim 4 (Canceled)

5. (Previously Presented) A method as claimed in claim 1,  
further comprising the step of utilizing, by the speech recognizer,  
a speech model which was trained with the aid of the information  
stored in the database.

Amendment in Reply to Final Office Action mailed on January 17, 2006

## Claim 6 (Canceled)

7. (Currently Amended) A dialogue system, comprising a database storing entries including company names and variants of the company names, the variants including at least one of mix-ups of part of company names, colloquial formulations of company names, abbreviations of company names, and acronyms of company names, and a processing unit for automatically recognizing company names in speech utterances, which wherein the processing unit comprises:

a speech recognizer, which is used for generating at least one word sequence hypothesis from a speech utterance consisting of one or more words,

a comparing unit, which is provided for making a comparison of the at least one word sequence hypothesis with the entries stored in the database and for selecting a company name as a recognition result in dependence on the result of the comparison, wherein certain words defined a priori are not taken into account when a word sequence hypothesis is compared with entries of the database.

Amendment in Reply to Final Office Action mailed on January 17, 2006

8. (Currently Amended) A method of automatic recognition of company names in speech utterances, comprising the steps of:

storing entries including company names and variants of the company names in a database,

generating at least one word sequence hypothesis by a speech recognizer from a speech utterance consisting of one or more words,

finding entries in the database that are at least partially found in the word sequence hypothesis by comparing the word sequence hypothesis with the entries which represent company names stored in the database, wherein certain words defined a priori are not taken into account when a word sequence hypothesis is compared with entries of the database,

producing a first probability for each entry found during the step of comparing, the probability being dependent on the number of words in each of the entries found in the word sequence hypothesis, wherein each word has a weight factor, particularly characteristic words having a large weight factor, the weight factor being taken into account in determining the probability for each entry, and

selecting a company name as a recognition result in dependence on the result of the comparison and probability of each entry.

Amendment in Reply to Final Office Action mailed on January 17, 2006

9. (Previously Presented) A method as claimed in claim 8, wherein the speech recognizer produces a second probability value for each of the at least one word sequence hypothesis, the first and second probability values being taken into account for the step of selecting.
